

## **ICCR 2023 Statement**

As a Responsible Care® company and member of Excellence Through Stewardship, Corteva Agriscience™ engages in a variety of outreach activities to help build strong working relationships with our stakeholders. Some of these activities include hosting facility tours, conducting stakeholder surveys, collaborating on special projects, promoting sustainable agricultural practices through education on integrated weed management practices and implementing educational programs highlighting the responsible use and benefits of our technology. We are committed to transparent dialogue with our stakeholders, including members of the agriculture value chain, policymakers, customers, and members of the public.

Corteva Agriscience has engaged in ongoing dialogue with members of the Interfaith Center on Corporate Responsibility (ICCR) on a variety of topics from biotechnology to sustainability. We have shared with ICCR information on our new products and responded to ICCR members' inquiries. We committed to ICCR to provide annual updates regarding the responsible use of the Enlist® Weed Control System. The following summary responds to that commitment.

*In response to stakeholder environmental and health impact concerns, Corteva Agriscience™ is committed to the annual public disclosure of compliance measures and performance related to the use of the Enlist Weed Control System (Enlist). Specific performance metrics were defined during the stewarded introduction of Enlist in 2015. Disclosure includes metrics focusing on product performance.*

*Based on an initial assessment, these metrics focus on grower training, compliance with label requirements, compliance with a Technology Use Agreement (TUA), as well as relevant measures of environmental and human health impact, including, but not limited to, any measures required by the Environmental Protection Agency (EPA) in conjunction with use of herbicides labeled for Enlist crops. In the event of any non-compliance with any of these metrics, we will assess the underlying cause and provide steps for remediation. We shared initial observations from a representative sample following the 2015 growing season. Compliance reporting of growers using Enlist at the end of subsequent growing seasons will continue, with performance and progress reported in the [sustainability](#) section of the Corteva Agriscience website.*

*During the 2023 season (October 2022-September 2023), Corteva continued formal training for thousands of stakeholders through our online modules, webinar series and in-person technology demonstrations. Attendees to these trainings included growers, applicators, seed sellers, and retailers. Current resources and training materials can be accessed at <https://www.enlist.com/en/enlist-360-training.html>*

*In general, product experience since introduction includes the following:*

- *All growers continue to be required to sign a TUA prior to purchasing traited seed. A copy of the Corteva TUA can be accessed at [www.traitstewardship.com](http://www.traitstewardship.com)*
- *In January 2022, [EPA renewed the registration for both Enlist herbicides for a 7-year period](#). Highlights of the registration include:*
  - *Enlist herbicides were the first products registered following the approach outlined in EPA's Endangered Species Act Workplan;*
  - *Enhanced pollinator stewardship including development, implementation, and maintenance of a pollinator protection stewardship plan; and*
  - *Additional protective measures to reduce the potential for surface water runoff.*

- *In August 2023, Enlist E3® soybeans became the number one selling soybean technology in the U.S.*
- *Through strong product performance and grower stewardship programs, the Enlist® weed control system continues to deliver neighbor friendly weed control illustrated with a continuation of few allegations of non-target damage.*
- *In 2023 Corteva did receive two allegations that non-Enlist® 2,4-D herbicide was used on Enlist crops. In response to these allegations, Corteva has established a formal process to solicit and receive tips/allegations of improper product use. A team has been created to then review these tips/allegations and will work to address any non-compliant herbicide use.*
- *In 2023 Corteva announced that growers will have PowerCore® Enlist® Refuge Advanced® (RA) and Vorceed™ Enlist® corn available in the 2024 season.*
- *Follow-up annual surveys as well as on-farm visits with participating growers indicated that growers are utilizing information made available to them via TUAs, Product Use Guides, Enlist.com website, and training programs.*
- *We continue to receive very positive feedback from growers on the performance of all aspects of the technology.*

™®Trademarks of Corteva Agriscience and its affiliated companies.

Enlist Duo® and Enlist One® herbicides are not registered for sale or use in all states or counties. Contact your state pesticide regulatory agency to determine if a product is registered for sale or use in your area. Enlist Duo and Enlist One herbicides are the only 2,4-D products authorized for use with Enlist™ crops. Always read and follow label directions.
